## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. Claims 1-9, 13-15, 18, 24 and 25 remain rejected under 35 U.S.C. 103(a) as being unpatentable over WO 99/57259. The reference discloses fabric care compositions comprising a modified cellulase. Surfactant is typically present at a most preferable range of 1% to 30% by weight (p. 18, 2<sup>nd</sup> para). Cationic softeners are preferred, and include coconut dimethyl hydroxyethyl ammonium chloride, which is disclosed as especially preferred (p 20, bottom). Typical softening components include distearoyloxyethyl dimethyl ammonium chloride (p. 21, 12)). Total cationic content is preferably about 1-8% (p. 23, 2<sup>nd</sup> para.) Most preferred nonionics are alcohols of 8-18 carbons (preferably averaging 10 carbons) with 2-10 ethoxy groups (p. 26, 2<sup>nd</sup> para.) Addition of silicone antifoaming agents, perfume and HCl in amounts which meet the limitations of applicant's elected composition, are exemplified. This reference differs from the claimed subject matter in that it does not disclose a composition which reads on applicant's elected composition with sufficient specificity to constitute anticipation.

It would have been obvious at the time the invention was made to make such a composition, because this reference teaches that all of the ingredients recited by applicants are suitable for inclusion in a surfactant composition. The person of ordinary skill in the surfactant art would expect the recited compositions to have properties similar to those compositions which are exemplified, absent a showing to the contrary.

In the case where the claimed ranges overlap or lie inside ranges disclosed by the prior art, a *prima facie* case of obviousness exists. *In re Wertheim*, 541 F.2d 257, 191 USPQ 90 (CCPA 1976); *In re Woodruff*, 919 F.2d 1575, 16 USPQ2d 1934 (Fed Cir. 1990). Applicant's recitation of 90, 95 or 99% suds reduction is drawn to determination of the suds-reducing-effective amount of a disclosed suds reducer, and amounts to routine optimization.

### ***Response to Arguments***

2. Applicant's arguments filed June 28, 2004 have been fully considered but they are not persuasive. Applicant argues that the person of ordinary skill in the surfactant art would not turn to the cited reference to solve the problem addressed by the present application. This is not persuasive because the cited reference is drawn to the same general problem as the present claims, that of laundering fabric. Accordingly it is analogous art. Applicant further argues that the cited reference teaches away from the present invention (apparently) by addressing a different immediate purpose. This is not persuasive because the reason or motivation to modify the reference may often suggest what the inventor has done, but for a different purpose or to solve a different problem. It is not necessary that the prior art suggest the combination to achieve the same advantage or result discovered by applicant. *In re Lintner*, 173 USPQ 560 (CCPA 1972)..

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
